- Building a Neural Network Using TensorFlow and Keras
- Convolutional Neural Networks (CNNs) for Image Classification
- Real-World Example: Handwritten Digit Recognition (MNIST Dataset)

7. **Natural Language Processing with Python**
    - Text Preprocessing with NLTK and spaCy
    - Building a Sentiment Analysis Model in Python
    - Real-World Example: Creating a Python-Based Chatbot
8. **Reinforcement Learning in Python**
    - Fundamentals of Reinforcement Learning
    - Implementing Q-Learning in Python
    - Real-World Example: Building an AI for a Simple Game
9. **Deploying AI Models with Python**
    - Exporting and Saving Models
    - Building Flask APIs for AI Predictions
    - Deploying AI Models Using Streamlit
10. **Ethics and Challenges in AI Development**
    - Mitigating Bias in AI Models
    - Ensuring Data Privacy in Python Applications
    - Real-World Considerations for Ethical AI
11. **End-to-End AI Projects in Python**
    - Project 1: Predicting Stock Market Trends
    - Project 2: Real-Time Face Recognition with OpenCV
    - Project 3: Sentiment Analysis for Customer Feedback
