Actors and the network

2 Up and running

2.1 Printing money

2.2 Starting to code

The protocol of the actor

Creating an application and instantiating the actor

Sending messages

Implementing the actor: Receiving messages

Terminating the system

The application

The solution in Git

Running the app

2.3 Keeping state with a variable

2.4 Keeping state with behaviors

2.5 Scheduling a message

3 One actor is no actor

3.1 Simple parser example

Coding the app

Coding the guardian and spawning

Sending messages back and forth: Adapting responses

The protocol with the adapter's message

The adapter's function

Delegating

A protocol with commands and responses as traits

Coding the worker

3.2 Asking and expecting a reply

A simple question

Coding the manager

The protocols

Asking

Coding the worker
