This book's scope is due to my experience as a trainer for Lightbend. Akka has many modules, and for new users, it is difficult to know where to look. This book should give you enough breadth and depth to be sure you know the essentials of Akka as well as the tools you should know and will use often.

acknowledgments

Thanks especially to my good friend Raymond Roestenburg, who trusted me to maintain the high quality of the first edition of this book. Thanks also to Johan Andren, Patrik Nordwall, Enno Runne, and Renato Guerra Calvalcanti for helping me with many of my questions.

I thank my editors, especially Toni Arritola, who taught me—among many other things—the difference between writing down ideas and making them understandable. Thank you to technical proofreader Ubaldo Pescatore, technical development editor Jean-François Morin, review editor Mihaela Batinic, production editor Deirdre Hiam, copyeditor Tiffany Taylor, proofreader Melody Dolab, and, of course, Marjan Bace and Michael Stephens. And thanks to all the readers who helped me correct mistakes.

To all the reviewers: Akon Dey, Alessandro Campeis, Andrei Shpakau, Andres Sacco, Carlos Vilchez, Clifford Thurber, Daniel van Dorp, Gary Bake, Gilberto Taccari, Grahame Oakland, John Ackley, Keith Kim, Nathan B. Crocker, Nenko Ivanov Tabakov, Peter Pfister, Satej Kumar Sahu, Tim van Deurzen, Todd Cook, Vincent Theron, William E. Wheeler, and Yogesh Shetty, your suggestions helped make this a better book.
