➥Handshake with [akka://words@127.0.0.1:2552] did not complete within
➥20000 ms                                                               ❼
```

❶ Akka-Remote has started with the TCP protocol and this canonical address.

❷ Node started successfully in cluster mode

❸ No automatic downing available for unreachable nodes (more info about downing later)

❹ ActorSystem type and cluster name taken from the ActorSystem

❺ Version from cluster.settings.app-version

❻ Doesn’t transition to Up until the leader is elected and grants the transition

❼ Tried to connect to other seeds, failed, and stopped trying after 20 seconds
