```
  }
}
```

❶ Creates a service to handle request => response

❷ Adds reflection to the handler

❸ Uses the ContainerService implementation

❹ Starts the server

❺ Stops the server at Return

11.2.7 Running the example

You can run this example by executing the following at the root of the Git repository:

```
$ sbt chapter11c/run
```

To use it, run the following commands at the command line:

```
$ grpcurl -plaintext -d '{"entityId": "id1", "kind": "bigbag", "size": 2}' \
       localhost:8080 ContainerService/AddCargo       ❶
{
  "ok": true
}

$ grpcurl -plaintext -d '{"entityId": "id1", "kind": "sack", "size": 4}' \
       localhost:8080 ContainerService/AddCargo       ❷
{
  "ok": true
}

$ grpcurl -plaintext -d '{"entityId": "id1"}' localhost:8080 \
       ContainerService/GetCargos                     ❸
{
  "cargo": [
    {
      "kind": "sack",
      "size": 4
    },
    {
```
