```
message MarketData {                    ❶
      string marketId = 1;
      FixtureData fixture = 2;
      OddsData odds = 3;
      enum Result {
            HOME_WINS = 0;
            HOME_LOSES = 1;
            TIE = 2;
      }
      Result result = 4;
      uint64 opensAt = 5;
}

message MarketId {                      ❶
      string marketId = 1;
}

message Response {                      ❶
      string message = 1;
}

message CancelMarket {                  ❶
      string marketId = 1;
      string reason = 2;
}

service MarketService {                 ❷

      rpc Open(MarketData) returns (Response) {}

      rpc Update(stream MarketData) returns (stream Response) {}

      rpc CloseMarket(MarketId) returns (Response) {}

      rpc Cancel(CancelMarket) returns (Response) {}

      rpc GetState(MarketId) returns (MarketData){}
}
```

❶ API messages types

❷ Service with calls proxying the market commands and responses

NOTE `CloseMarket` has the suffix *market* in its name to avoid conflicts with the `close()` method generated by Akka gRPC in the
