

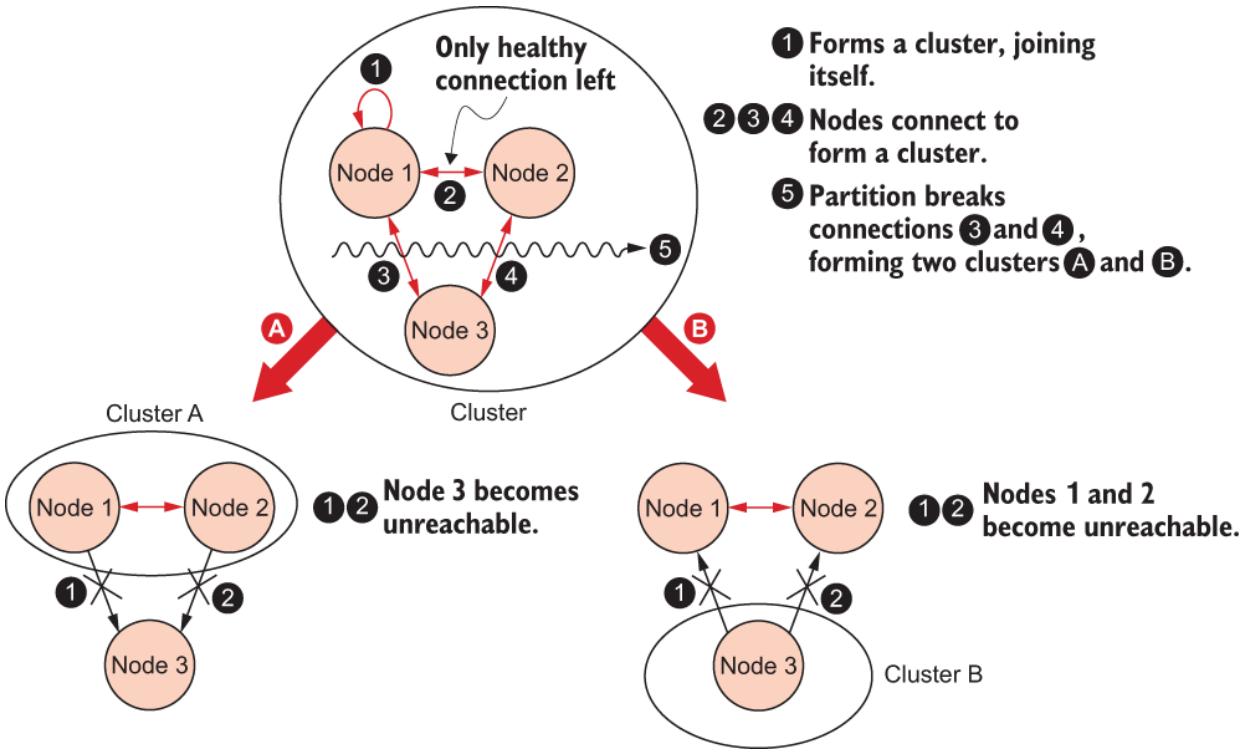

Figure 13.2 Cluster splitting in two

Because `akka-management-cluster-http` is enabled in this example, you can query the status of the cluster in node 1—the one using port 2551—to check its view of the cluster. To do so, follow the README.md instructions. The result is shown in the following listing.

Listing 13.7 Viewpoint of the cluster from node 1

```
{
  "leader": "akka://cluster@127.0.0.1:2551",
  "members": [                                          ❶
    {
      "node": "akka://cluster@127.0.0.1:2551",...
      "status": "Up"
    },
    {
      "node": "akka://cluster@127.0.0.1:2552",...
      "status": "Up"
    },
```
