```
  }
}
```

❶ Default parameters and deserializers
❷ Group to which to assign each consumer; each instance of this class
❸ Earliest means to consume from the first element at the start
❹ Default parameters and serializers
❺ Reads from test3 the key, value, and reference to the offset included
❻ ProducerMessage.Envelope writes to the topic test4 key and value from the Source.
❼ ProducerMessage.Envelope passes through the offset from the Source to the Sink.
❽ Commits the passThrough and materializes the stream into a DrainingControl

You can run the `ConsumerProducerAtleastOnce` with the following:

```
sbt "chapter14/runMain ConsumerProducerAtleastOnce"
```

Now let's move on to what is commonly referred to as exactly-once delivery.

14.3 Effectively-once delivery

Alpakka Kafka uses underlying Kafka transactions or so-called *exactly-once* delivery. However, to be accurate and to clarify part of the underlying mechanism, it is worth noting that there is no such thing as exactly-once delivery, in Kafka or anywhere else. A better term is effectively-once. This means you get at-least-once semantics, and when duplicates appear, they are deduplicated.

Let's say you have a process that moves items from A to B to C. It starts by moving 10 items in a batch from A to B, and if it processes only 5, the process fails. Now you have 5 items in B that can also go
