- You can write to Kafka with `Producer.plainSink` with at-most-once semantics, with `Producer.committableSink` with at-least-once semantics, and with `Transactional.sink` with effectively-once semantics.
- `FileIO.fromPath` and `FileIO.toPath` allow you to read and write files.
- You can convert the contents of a CSV file by first parsing it into lines with `CsvParsing.lineScanner()`. Then you convert it to a map with headings and values with `CsvToMap.toMapAsStrings()`, so you can filter and transform the values by columns, and finally convert back to CSV format with `CsvFormatting.format()`.
