

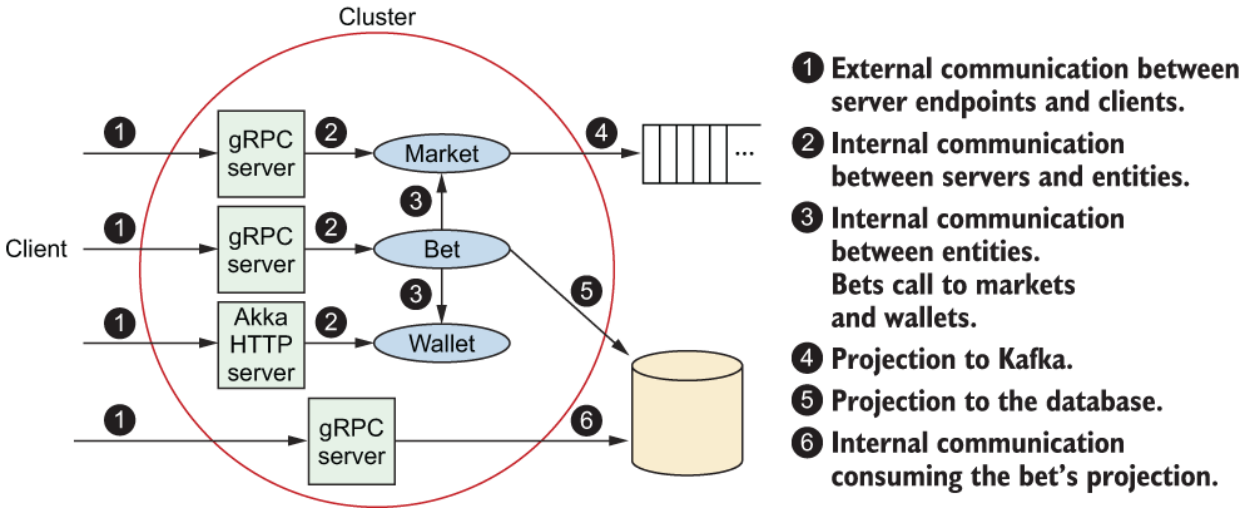

Figure 15.1 Big picture of the example

15.1 Projections

This chapter shows how to add a database projection and a Kafka projection to the example project. Both read from the journal, but they differ on the writing side: the first writes to a database, and the second writes to Kafka. Now that you know Alpakka and Kafka (covered in chapter 14), this discussion should be easy for you.

NOTE The source code for this chapter is available at www.manning.com/books/akka-in-action-second-edition or https://github.com/franciscolopez sancho/akka-topics/tree/main/betting-house. You can find the contents of any snippet or listing in the .scala file with the same name as the class, object, or trait.

15.1.1 Database projection
