```
      }
    }

    http{
      port = 8558                          ❹
      bind-hostname = "0.0.0.0"            ❺
    }
  }
  persistence {...}                        ❻
}
```

❶ Same as local.conf (ignored here)

❷ %s is replaced with the configured effective name, which defaults to the ActorSystem name.

❸ Sets the Kubernetes API as the discovery method

❹ Binds to this port

❺ Binds to all IP addresses of this host

❻ Same as local.conf (ignored here)

15.2.4 Services, sharding, and projections

This code is the same for both configurations, except for Kafka bootstrap-servers.

Listing 15.11 Services, sharding, and projections configuration

```
services {                                 ❶
  host = "0.0.0.0"
  bet.port = 9000
  wallet.port = 9001
  market.port = 9002
  bet-projection.port = 9003
}
sharding {                                 ❷
  bet.tags.size = 3
  market.tags.size = 3
}
kafka {
  market-projection.topic = "market-projection"    ❸
}
kafka-connection-settings {
```
