```
         "no higher than 2 please")
      100 / elem
    }
  ...
}
```

And you can test this in a stream as shown in the next listing.

Listing 16.6 Adding supervision to a stream

```
class ExceptionsSpec ... {
  ...

  "an Exception" should {
    "be possible to overcome ArithmeticException" in {

      val result =
        Source(-1 to 3
          .map(riskyHandler)
          .log("tried riskyHandler")
          .map(println)
          .withAttributes(
            ActorAttributes.supervisionStrategy(decider))    ❶
          .run()

      Await.result(result, 1.seconds)
    }
  }
  ...
}
```

❶ Ad hoc supervision using the decider

The results are as follows:

```
-100
100
50
[2022-07-04 19:25:50,848] [ERROR] [akka.stream.Materializer] []
➥[SampleSpec-akka.actor.default-dispatcher-3] - [riskyHandler] Upstream
➥failed.
java.lang.IllegalArgumentException: no higher than 2 please
```
