A.2 Installing sbt

With SDKMAN!, you can install sbt with `sdk install sbt`. If you have Windows, follow the instructions at https://www.scala-sbt.org/download.html.

A.3 Installing Docker

You need Docker to create the images to run the Akka clusters in Kubernetes and spin up the databases for the Akka persistence examples. Go to https://docs.docker.com/get-docker and follow the instructions.

A.4 Installing curl

You can use curl to interact with the Akka HTTP port. Go to https://curl.se/download.html, and follow the instructions.

A.5 Installing grpcurl

You can use `grpcurl` to interact with Akka gRPC ports. Go to https://github.com/fullstorydev/grpcurl#installation, and follow the instructions.

A.6 Installing kcat
