SpaceController.java in your text editor and locate the `createSpace` method. Add the lines highlighted in the following listing:

```
return database.withTransaction(tx -> {
      var spaceId = database.findUniqueLong(
          "SELECT NEXT VALUE FOR space_id_seq;");

      database.updateUnique(
          "INSERT INTO spaces(space_id, name, owner) " +
              "VALUES(?, ?, ?);", spaceId, spaceName, owner);

      database.updateUnique(    #A
          "INSERT INTO permissions(space_id, user_id, perms)
" +    #A
              "VALUES(?, ?, ?)", spaceId, owner, "rwd");
#A

      response.status(201);
      response.header("Location", "/spaces/" + spaceId);

      return new JSONObject()
          .put("name", spaceName)
          .put("uri", "/spaces/" + spaceId);
    });
```

#A Ensure the space owner has all permissions on the newly created space.

We now need to add checks to enforce that the user has appropriate permissions for the actions that they are trying to perform. You could hard-code these checks into each individual method, but it’s much more maintainable to enforce access control decisions using filters that run before
