#A Before anything else you should try to authenticate the user.
#B Anybody may create a space, so you just enforce that the user is logged in.
#C For each operation you add a before() filter that ensures the user has correct permissions.
#D Anybody can register an account, and they won't be authenticated first.

With this in place, if you create a second user "demo2" and try to read a message created by the existing demo user in their space, then you get a 403 Forbidden response:

```
$ curl -i --cacert server.pem -u demo2:password
[CA]https://localhost:4567/spaces/1/messages/1
HTTP/1.1 403 Forbidden
Date: Wed, 06 Feb 2019 15:15:56 GMT

```

3.6.4 Adding new members to a Natter space

So far there is no way for any user other than the space owner to post or read messages from a space. It's going to be a pretty anti-social social network unless you can add other users! You can add a new operation that allows another user to be added to a space by any existing user
