#A Ensure the permissions granted are valid.
#B Update the permissions for the user in the access control list.

We can then add a new route to your main method to allow adding a new member by POSTing to `/spaces/:spaceId/members`. Open Main.java in your editor again and add the following new route and access control filter to the main method underneath the existing routes:

```
  before("/spaces/:spaceId/members",
      userController.requirePermission("POST", "r"));
  post("/spaces/:spaceId/members",
spaceController::addMember);
We can test this out by adding the demo2 user to the space
and let him read messages:
$ curl -i --cacert server.pem -u demo:password
[CA]-H 'Content-Type: application/json'
[CA]-d '{"username":"demo2","permissions":"r"}'
[CA]https://localhost:4567/spaces/1/members
HTTP/1.1 200 OK
Date: Wed, 06 Feb 2019 15:52:20 GMT
Content-Type: application/json
X-Content-Type-Options: nosniff
X-XSS-Protection: 1; mode=block
Cache-Control: private, max-age=0
Strict-Transport-Security: max-age=31536000
Server:
Transfer-Encoding: chunked

{"permissions":"r","username":"demo2"}
$ curl -i --cacert server.pem -u demo2:password
[CA]https://localhost:4567/spaces/1/messages/1
HTTP/1.1 200 OK
Date: Wed, 06 Feb 2019 15:52:27 GMT
Content-Type: application/json
