```
<html>
  <head>
    <title>Natter!</title>
    <script type="text/javascript" src="natter.js"></script>
  #A
    <style type="text/css">
      input { margin-right: 100% }    #B
    </style>
  </head>
  <body>
    <h2>Create Space</h2>
    <form id="createSpace">    #C
      <label>Space name: <input name="spaceName" type="text"
                                id="spaceName">
      </label>
      <label>Owner: <input name="owner" type="text"
id="owner">
      </label>
      <button type="submit">Create</button>
    </form>
  </body>
</html>
```

#A Include the natter.js script file
#B Style the form as you wish using CSS
#C The HTML form has an ID and some simple fields

4.1.2 Intercepting form submission

Because web browsers do not know how to submit JSON to a REST API, you need to instruct the browser to call your `createSpace` function when the form is submitted instead of its default behavior. To do this, you can add some more
