```
{"token":"node0l2q3fc024gw8wq4wp961y5rk0"}
```

#A Use the -c option to save cookies from the response to a file.
#B The server returns a Set-Cookie header for the session cookie.

Finally, you can make a call to an API endpoint. You can either manually create a Cookie header, or you can use curl's `-b` option to send any cookies from the cookie jar you created in the previous request:

```
$ curl -i -b /tmp/cookies \    #A
  -H 'Content-Type: application/json' \
  -d '{"name":"test space","owner":"test"}' \
  https://localhost:4567/spaces
HTTP/1.1 201 Created    #B
Date: Sun, 19 May 2019 19:15:42 GMT
Location: /spaces/1
Content-Type: application/json
X-Content-Type-Options: nosniff
X-XSS-Protection: 1; mode=block
Cache-Control: private, max-age=0
Server:
Transfer-Encoding: chunked

{"name":"test space","uri":"/spaces/1"}
```

#A Use the -b option to curl to send cookies from a cookie jar.
#B The request succeeds as the session cookie was validated.

EXERCISES

2. What is the best way to avoid session fixation attacks?
