```
    mvn clean compile exec:java
```

and then open a browser and navigate to https://localhost:4567/login.html. If you open your browser's developer tools, you can examine the HTTP requests that get made as you interact with the UI. Create a test user on the command line as before:

```
curl -H 'Content-Type: application/json' \
   -d '{"username":"test","password":"password"}' \
  https://localhost:4567/users
```

Then type in the same username and password into the login UI and click Login. You will see a request to `/sessions` with an Authorization header with the value `Basic dGVzdDpwYXNzd29yZA==`. In response, the API returns a Set-Cookie header for the session cookie and the anti-CSRF token in the JSON body. You will then be redirected to the Create Space page. If you examine the cookies in your browser you will see both the `JSESSIONID` cookie set by the API response and the `csrfToken` cookie set by JavaScript, as in figure 4.14.

Figure 4.14 The two cookies viewed in Chrome's developer tools. The JSESSIONID cookie is set by the API and marked as HttpOnly. The csrfToken cookie is
