interface. You can then define a SecureTokenStore by subtyping the desired combination of security properties. In this case with both confidentiality and authentication.

Navigate to src/main/java/com/manning/apisecurityinaction/token and add the three new marker interfaces, as shown in listing 6.9. Create three separate files, ConfidentialTokenStore.java, AuthenticatedTokenStore.java, and SecureTokenStore.java to hold the three new interfaces.

Listing 6.9 The secure marker interfaces

```
package com.manning.apisecurityinaction.token;    #A

public interface ConfidentialTokenStore extends TokenStore
{    #A
}    #A

package com.manning.apisecurityinaction.token;    #B

public interface AuthenticatedTokenStore extends TokenStore
{    #B
}    #B

package com.manning.apisecurityinaction.token;    #C

public interface SecureTokenStore extends
ConfidentialTokenStore,    #C
    AuthenticatedTokenStore {    #C
}    #C
```
