else, the second method will be called and return only an `AuthenticatedTokenStore`.

- The `EncryptedTokenStore` and `EncryptedJwtTokenStore` can both be changed to implement `SecureTokenStore` because they both provide authenticated encryption that achieves the combined security goals no matter what underlying store is passed in.

## Listing 6.10 Updating the HmacTokenStore

```
public class HmacTokenStore implements SecureTokenStore {
#A

    private final TokenStore delegate;
    private final Key macKey;

    private HmacTokenStore(TokenStore delegate, Key macKey)
{    #B
        this.delegate = delegate;
        this.macKey = macKey;
    }
    public static SecureTokenStore
wrap(ConfidentialTokenStore store,    #C
                                        Key macKey) {    #C
        return new HmacTokenStore(store, macKey);    #C
    }    #C
    public static AuthenticatedTokenStore wrap(TokenStore
store,    #D
                                          Key macKey) {    #D
        return new HmacTokenStore(store, macKey);    #D
    }    #D
```

#A Mark the HmacTokenStore as secure
#B Make the constructor private
