# 7 OAuth2 and OpenID Connect

## This chapter covers

- Enabling third-party access to your API with scoped tokens
- Integrating an OAuth2 Authorization Server for delegated authorization
- Validating OAuth2 access tokens with token introspection
- Implementing single sign-on with OAuth and OpenID Connect

In the last few chapters, you've implemented user authentication methods that are suitable for the Natter UI and your own desktop and mobile apps. Increasingly, APIs are being opened to third-party apps and clients from other businesses and organizations. Natter is no different, and your newly appointed CEO has decided that you can boost growth by encouraging an ecosystem of Natter API clients and services. In this chapter you'll integrate an OAuth2 Authorization Server to allow your users to delegate access to third-party clients. By using scoped tokens, users can restrict which parts of the API those clients can access. Finally, you'll see how OAuth provides a standard way to centralize token-based authentication within your
