Typically, it is much more efficient to read this attribute than to search for the groups that a user is a member of.

> **TIP** If you need to search for groups regularly, it can be worthwhile to cache the results for a short period to prevent excessive searches on the directory.

EXERCISES

Answers to exercises are at the end of the chapter.

1. True or false, in general can groups contain other groups as members?
2. Which three of the following are common types of LDAP groups?

a. Static groups.

b. Abelian groups.

c. Dynamic groups.

d. Virtual static groups.

e. Dynamic static groups.

f. Virtual dynamic groups.

3. Given the following LDAP filter:

```
(&(objectClass=#A)(member=uid=alice,dc=example,dc=com))
```

which one of the following object classes would be inserted into the position marked #A to search for static groups Alice belongs to?
