```
    @Override
    boolean checkPermitted(Map<String, Object> subject,
                           Map<String, Object> resource,
                           Map<String, Object> action,
                           Map<String, Object> env) {

        var session = kieContainer.newKieSession();    #B
        try {
            var decision = new Decision();    #C
            session.setGlobal("decision", decision);    #C

            session.insert(new Subject(subject));    #D
            session.insert(new Resource(resource));    #D
            session.insert(new Action(action));    #D
            session.insert(new Environment(env));    #D

            session.fireAllRules();    #E
            return decision.isPermitted();    #E

        } finally {
            session.dispose();    #F
        }
    }
}
```

#A Load all rules found in the classpath.
#B Start a new Drools session.
#C Create a Decision object and set it as a global variable named “decision”
#D Insert facts for each category of attributes.
#E Run the rule engine to see which rules match the request and check the decision.
#F Dispose of the session when finished.
