named natter-database-service.yaml in the kubernetes folder with the contents of listing 10.4, and then run

```
kubernetes apply -f kubernetes/natter-database-service.yaml
```

to configure the service.

Listing 10.4 The database service

```
apiVersion: v1
kind: Service
metadata:
  name: natter-database-service    #A
  namespace: natter-api    #A
spec:
  selector:    #B
    app: natter-database    #B
  ports:
    - protocol: TCP    #C
      port: 9092    #C
```

#A Give the service a name in the natter-api namespace
#B Select the pods that implement the service using labels
#C Expose the database port
