Listing 2.4 Creating a new social space

```
package com.manning.apisecurityinaction.controller;
import org.dalesbred.Database;
import org.json.*;
import spark.*;
public class SpaceController {
private final Database database;
public SpaceController(Database database) {
this.database = database;
}
public JSONObject createSpace(Request request, Response
response)
throws SQLException {
var json = new JSONObject(request.body()); #A
var spaceName = json.getString("name");
var owner = json.getString("owner");
return database.withTransaction(tx -> { #B
var spaceId = database.findUniqueLong( #C
"SELECT NEXT VALUE FOR space_id_seq;"); #C
// WARNING: this next line of code contains a
// security vulnerability!
database.updateUnique(
"INSERT INTO spaces(space_id, name, owner) " +
"VALUES(" + spaceId + ", '" + spaceName +
"', '" + owner + "');");
response.status(201); #D
response.header("Location", "/spaces/" + spaceId); #D
return new JSONObject()
.put("name", spaceName)
.put("uri", "/spaces/" + spaceId);
});
}
}
```

#A Parse the request payload and extract details from the JSON.
