```
    nginx.ingress.kubernetes.io/auth-tls-secret: "natter-
api/ca-secret"    #A
    nginx.ingress.kubernetes.io/auth-tls-verify-depth: "1"
#A
    nginx.ingress.kubernetes.io/auth-tls-pass-certificate-to-
upstream:    #A
        "true"    #A
spec:
  tls:
    - hosts:
        - api.natter.local
      secretName: natter-tls
  rules:
    - host: api.natter.local
      http:
        paths:
          - backend:
              serviceName: natter-api-service
              servicePort: 4567
```

#A Annotations to allow optional client certificate authentication

You can now update the ingress definition by running

```
kubectl apply -f kubernetes/natter-ingress.yaml
```

> **TIP** If changes to the ingress controller don't seem to be working, check the output of `kubectl describe ingress -n natter-api` to ensure the annotations are correct. For further troubleshooting tips check the official documentation at https://kubernetes.github.io/ingress-nginx/troubleshooting/.
