from Shakespeare, your favorite quotes, or anything you like.

> **NOTE** You won't be able to use this client yet until you write the server to accompany it in the next section.

Listing 12.3 The DTLS client

```
public static void main(String... args) throws Exception {
    try (var channel = new
DtlsDatagramChannel(getClientContext());    #A
         var in =
Files.newBufferedReader(Paths.get("test.txt"))) {    #B
        logger.info("Connecting to localhost:54321");
        channel.connect("localhost", 54321);    #C

        String line;
        while ((line = in.readLine()) != null) {    #D
            logger.info("Sending packet to server: {}",
line);    #D
            channel.send(line.getBytes(UTF_8));    #D
        }

        logger.info("All packets sent");
        logger.info("Used cipher suite: {}",    #E
                channel.getSession().getCipherSuite());    #E
    }
}
```

#A Open the DTLS channel with the client SSLContext
#B Open a text file to send to the server
#C Connect to the server running on the local machine and port 54321.
#D Send the lines of text to the server
#E Print details of the DTLS connection
