```
urn:ietf:params:oauth:grant-type:device_code
```

to indicate that the device authorization grant is being used. The client also includes its client ID and the device code itself. If the client is confidential, it must also authenticate using its client credentials, but this example is using a public client. Open the DeviceGrantClient.java file again and add the method from listing 13.17.

Listing 13.17 Checking status of the authorization request

```
private static JSONObject pollAccessTokenEndpoint(
        String clientId, String deviceCode) throws Exception
{
    var form = "client_id=" + URLEncoder.encode(clientId,
UTF_8) +    #A
        "&grant_type=urn:ietf:params:oauth:grant-
type:device_code" +    #A
        "&device_code=" + URLEncoder.encode(deviceCode,
UTF_8);    #A

    var request = HttpRequest.newBuilder()    #B
            .header("Content-Type",     #B
                    "application/x-www-form-urlencoded")
#B

.uri(URI.create("https://as.example.com/access_token"))    #B
            .POST(BodyPublishers.ofString(form))    #B
            .build();    #B
    var response = httpClient.send(request,
BodyHandlers.ofString());    #B
    return new JSONObject(response.body());    #C
}
```
