If you've installed ForgeRock AM using the instructions in section A.3.1 you already have an LDAP directory server running on port 50389, because this is what AM uses as its internal database and user repository. You can connect to the directory using the following details:

- URL: ldap://localhost:50389/
- Bind DN: cn=Directory Manager
- Bind password: the admin password you used when installing AM

A.4.2 Installing an open source LDAP directory server

To be written.
