```
maxSize

  #type HashTable

hashTable

  #type LinkedList
  elements

  #type LinkedListNode
  this.elementsTail = null

  function LRUCache(maxElements)
                                    #1
     maxSize ← maxElements
                                           #2
     hashTable ← new
HashTable(maxElements)                                    #3
     elements ← new
LinkedList()                                               #4
     elementsTail ←
null                                                       #5
```

#1 The signature of the constructor for the `LRUCache` object. We pass the max number of elements that the cache should store.
#2 We need to remember how many entries we can store.
#3 Init the hash table (the max size helps computing the internal parameters for the table).
#4 Init the linked list with the elements (for now, it's just empty).
#5 The list is empty, so the pointer to last element is `null`.
