

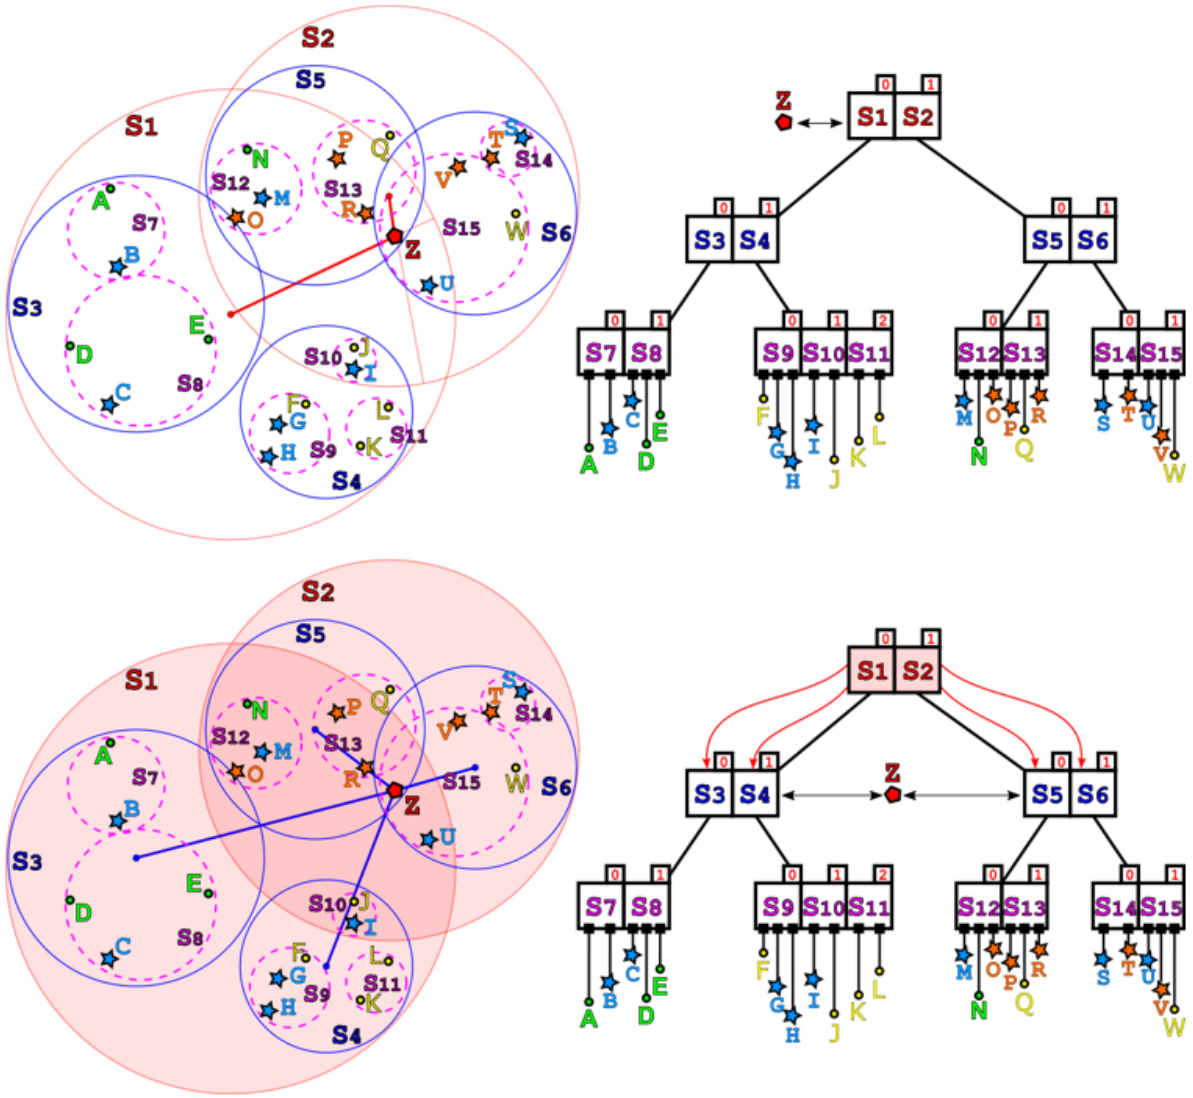

Figure 10.10 Search on a SS-tree: the first few steps of searching for point `Z`. The SS-tree shown is derived from the one in figure 10.9, with a few minor changes; the name of the entries have been removed here and letters from `A` to `W` are used instead, to reduce clutter. Top: The first step of the search is comparing `Z` to the spheres in the tree's root: for each of them, computes the distance between `Z` and its centroid, and checks if it's smaller than the sphere's radius. Bottom: since both S_1 and S_2 intersect `Z`, we need to
