brief contents

1 *Introducing Data Structures*

PART 1: IMPROVE OVER BASIC DATA STRUCTURES

2 *Improve priority queues: d-way heaps*

3 *Treaps: Using Randomization to Balance Binary Search Trees*

4 *Bloom Filter: Reduce the memory needed to keep track of content*

5 *Disjoint Set: Sub-linear-time processing of disjoint sets*

6 *Trie, Radix Trie: Efficient Strings Search*

7 *Use case: LRU Cache*

PART 2: MULTI-DIMENSIONAL QUERIES
