

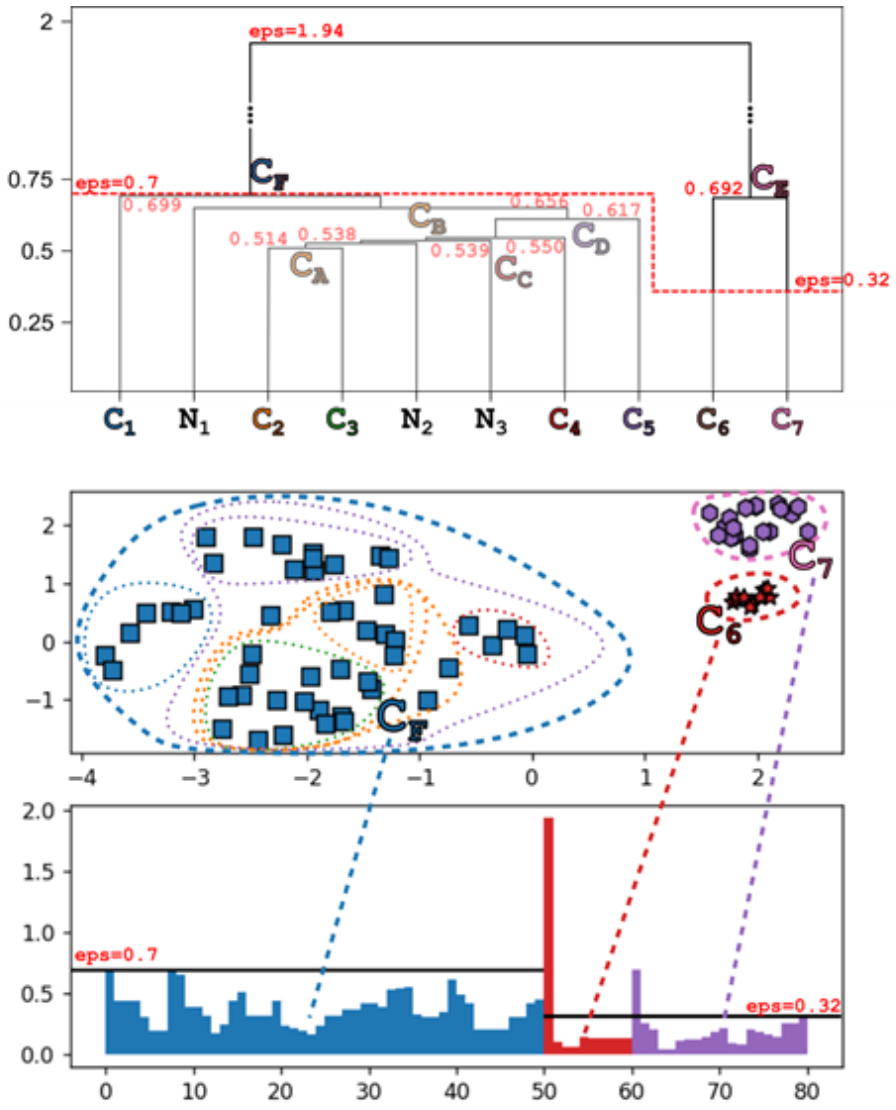

Figure 12.23 The dendrogram built from the result produced by OPTICS, on our example dataset, with parameters ε_{MAX}=2.0 and `minPoints`=3. For the sake of clarity, we omit the bottom portion of the dendrogram, for ε<0.5. The clusters formed for ε==0.5 are named from C_1 to C_7, and are considered the basic units in this plot (normally we would start from the single points). Super-clusters merged from them are named C_A to C_F.
