

Cleaning up

Terminate the EC2 instance named `growingup` of type `m5.large` to stop paying for it as follows:

1. Go to EC2 in the AWS Management Console: https://console.aws.amazon.com/ec2/.
2. Open the list of all virtual machines by selecting Instances from the subnavigation options.
3. Select the running virtual machine by clicking the row in the table.
4. In the Actions menu, select Instance State > Terminate Instance.

3.5 Starting a virtual machine in another data center

AWS offers data centers all over the world. Take the following criteria into account when deciding which region to choose for your cloud infrastructure:

- *Latency*—Which region offers the shortest distance between your users and your infrastructure?
- *Compliance*—Are you allowed to store and process data in that country?
- *Service availability*—AWS does not offer all services in all regions. Are the services you are planning to use available in the region? Check out the service availability region table at https://aws.amazon.com/about-aws/global-infrastructure/regional-product-services/ or https://awsservices.info.
