

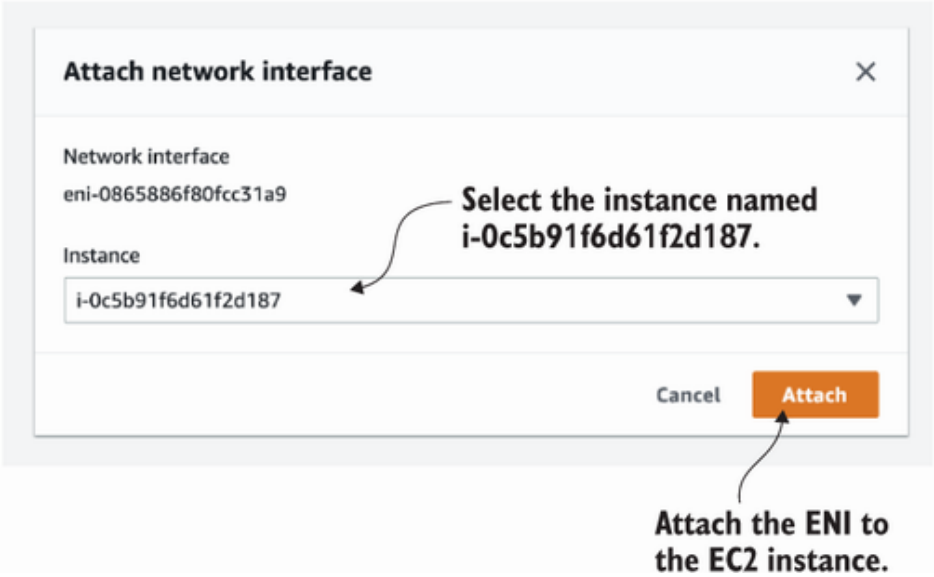

Figure 3.27 Attaching an additional networking interface to your virtual machine

You've attached an additional networking interface to your virtual machine. Next, you'll associate an additional public IP address to the additional networking interface. To do so, note the network interface ID of the 2nd interface shown in the overview--`eni-0865886f80fcc31a9` in our example—and follow these steps:

1. Open the AWS Management Console, and go to the EC2 service.
2. Choose Elastic IPs from the submenu.
3. Click Allocate Elastic IP Address as you did in section 3.6.
4. Select the newly created public IP address, and select Associate Elastic IP Address from the Actions menu.
5. Select Network Interface as the resource type, as shown in figure 3.28.
6. Select your 2nd interface's ID.
7. Select the only available private IP of your network interface.
8. Click Associate to finish the process.
