

Cleaning up

It's time to clean up your setup:

1. Terminate the virtual machine, and wait until it is terminated.
2. Go to Networking Interfaces, and select and delete the 2nd networking interface.
3. Change to Elastic IPs, and select and release the two public IP addresses by clicking Release Elastic IP Address from the Actions menu.
4. Go to Security Groups, and delete the `launch-wizard-1` security group you created.

That's it. Everything is cleaned up, and you're ready for the next section.

3.8 Optimizing costs for virtual machines

Usually you launch virtual machines *on demand* in the cloud to gain maximum flexibility. AWS calls them on-demand instances, because you can start and stop VMs on demand, whenever you like, and you're billed for every second or hour the machine is running.

Billing unit: Seconds

Most EC2 instances running Windows or Linux (such as Amazon Linux or Ubuntu) are billed per second. The minimum charge per instance is 60 seconds. For example, if you terminate a newly launched instance after 30 seconds, you have to pay for 60 seconds. But if you terminate an instance after 61 seconds, you pay exactly for 61 seconds.

Other instances are billed per hour. See https://aws.amazon.com/ec2/pricing/ for details.
