

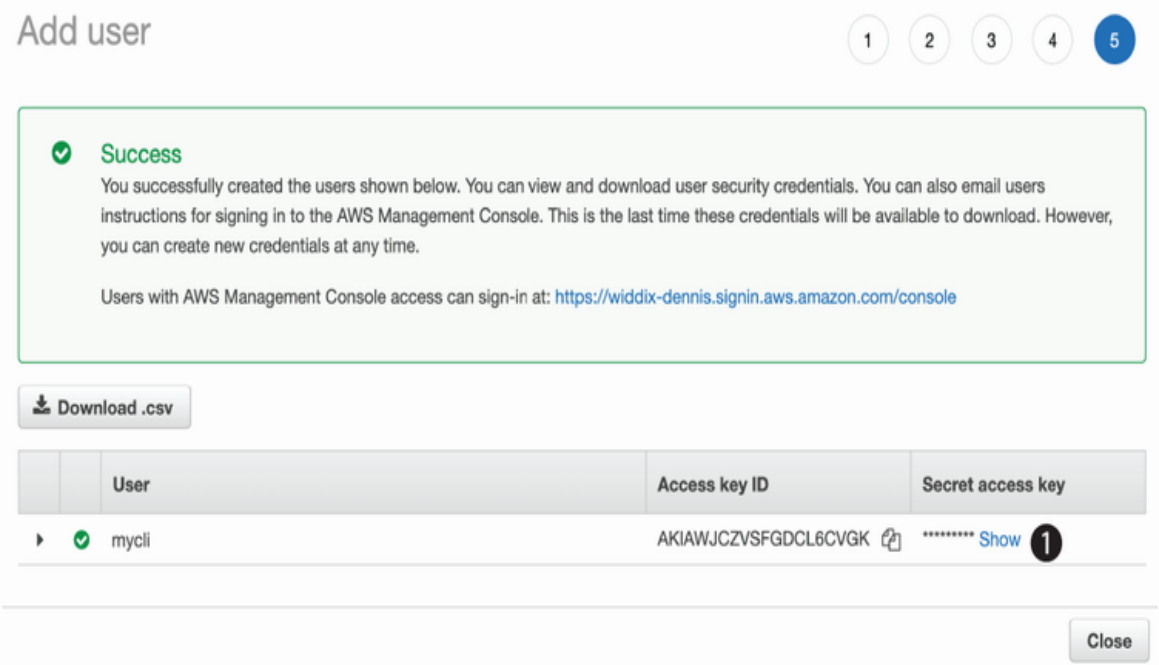

**Figure 4.6 Showing the access key of an IAM user**

Open the terminal on your computer (PowerShell on Windows or a shell on Linux and macOS; not the AWS Management Console), and run `aws configure`. You're asked for the next four pieces of information:

1. *AWS access key ID*—Copy and paste this value from the Access key ID column (your browser window).
2. *AWS secret access key*—Copy and paste this value from the Secret access key column (your browser window).
3. *Default region name*—Enter us-east-1.
4. *Default output format*—Enter json.

In the end, the terminal should look similar to this:

```
$ aws configure
 AWS Access Key ID [None]:  AKIAIRUR3YLPOSVD7ZCA    ①
 AWS Secret Access Key [None]:
➥ SSKIng7jkAKERpcT3YphX4cD87sBYgWVw2enqBj7         ②
 Default region name [None]: us-east-1
 Default output format [None]: json
```
