for the following:

- Protecting the network through automated monitoring systems and robust internet access, to prevent distributed denial of service (DDoS) attacks
- Performing background checks on employees who have access to sensitive areas
- Decommissioning storage devices by physically destroying them after end of life
- Ensuring the physical and environmental security of data centers, including fire protection and security staff

The security standards are reviewed by third parties; you can find an up-to-date overview at https://aws.amazon.com/compliance/.

What are your responsibilities? See the following:

- Configuring access management that restricts access to AWS resources like S3 and EC2 to a minimum, using AWS IAM
- Encrypting network traffic to prevent attackers from reading or manipulating data (e.g., using HTTPS)
- Configuring a firewall for your virtual network that controls incoming and outgoing traffic with security groups and NACLs
- Encrypting data at rest. For example, enable data encryption for your database or other storage systems
- Managing patches for the OS and additional software on virtual machines

Security involves an interaction between AWS and you, the customer. If you play by the rules, you can achieve high security standards in
