```
      "Effect": "Allow",
      "Action": "ec2:*",
      "Resource": "*"
   }, {
      "Effect": "Deny",                          ①
      "Action": "ec2:TerminateInstances",        ②
      "Resource": "*"
   }]
}
```

① Action is denied.

② Terminate EC2 instances.

The following identity policy denies all EC2 actions. The `ec2:TerminateInstances` statement isn't crucial, because `Deny` overrides `Allow`. When you deny an action, you can't allow that action with another statement:

```
{
   "Version": "2012-10-17",
   "Statement": [{
      "Effect": "Deny",
      "Action": "ec2:*",                         ①
      "Resource": "*"
   }, {
      "Effect": "Allow",
      "Action": "ec2:TerminateInstances",        ②
      "Resource": "*"
   }]
}
```

① Denies every EC2 action

② Allow isn't crucial; Deny overrides Allow.

So far, the `Resource` part has been set to `*` to apply to every resource. Resources in AWS have an Amazon Resource Name (ARN); figure 5.7 shows the ARN of an EC2 instance.
