

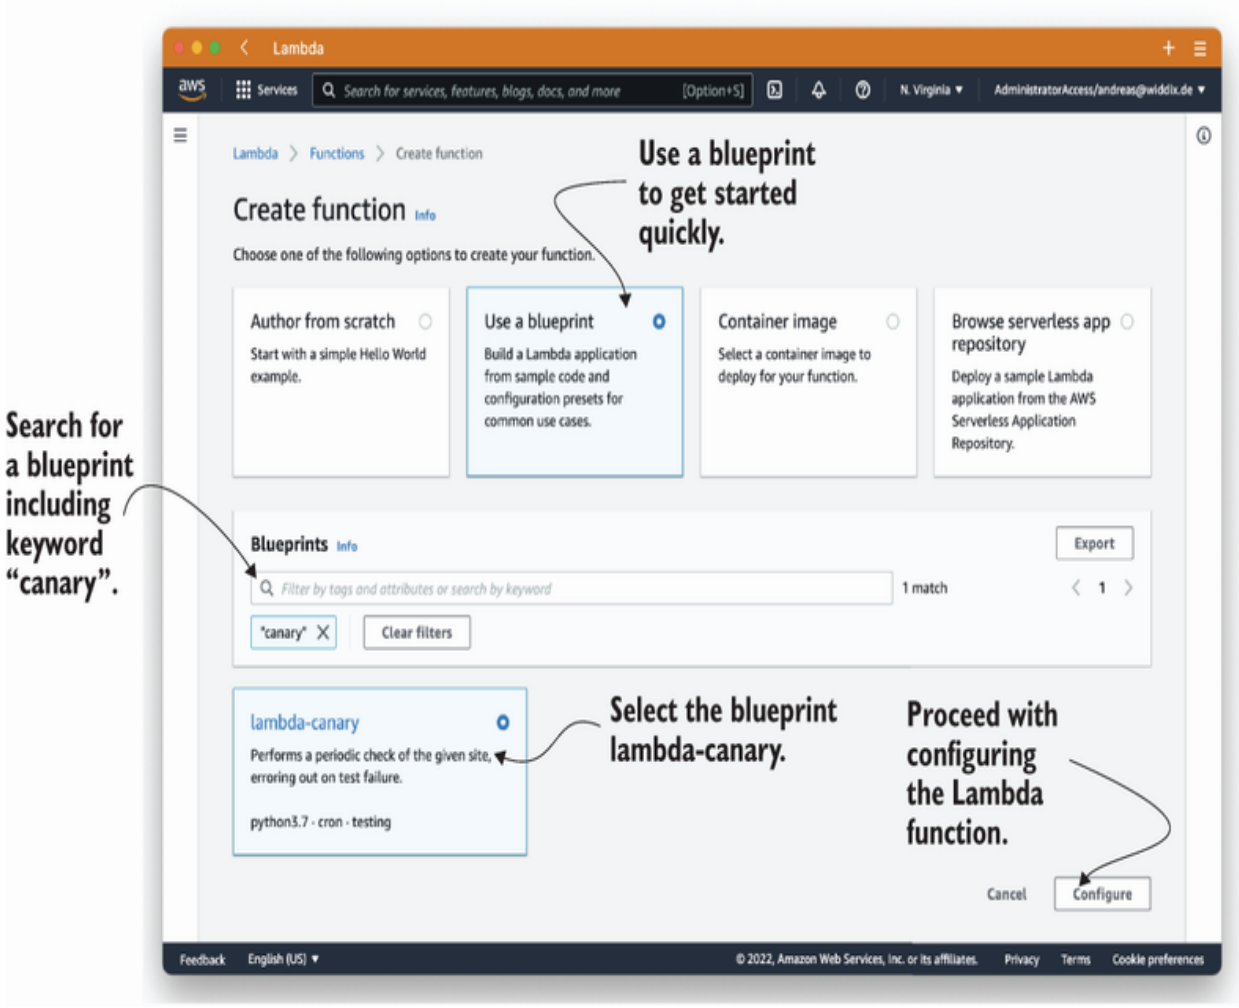

Figure 6.4 Creating a Lambda function based on a blueprint provided by AWS

In the next step of the wizard, you need to specify a name for your Lambda function, as shown in figure 6.5. The function name needs to be unique within your AWS account and the current region US East (N. Virginia). In addition, the name is limited to 64 characters. To invoke a function via the API, you need to provide the function name. Type in website-health-check as the name for your Lambda function.
