3. Enter a description that will help you to understand what is going on if you come back later.
4. Select Schedule Expression as the rule type. You will learn about the other option, Event Pattern, at the end of this chapter.
5. Use rate(5 minutes) as the schedule expression.

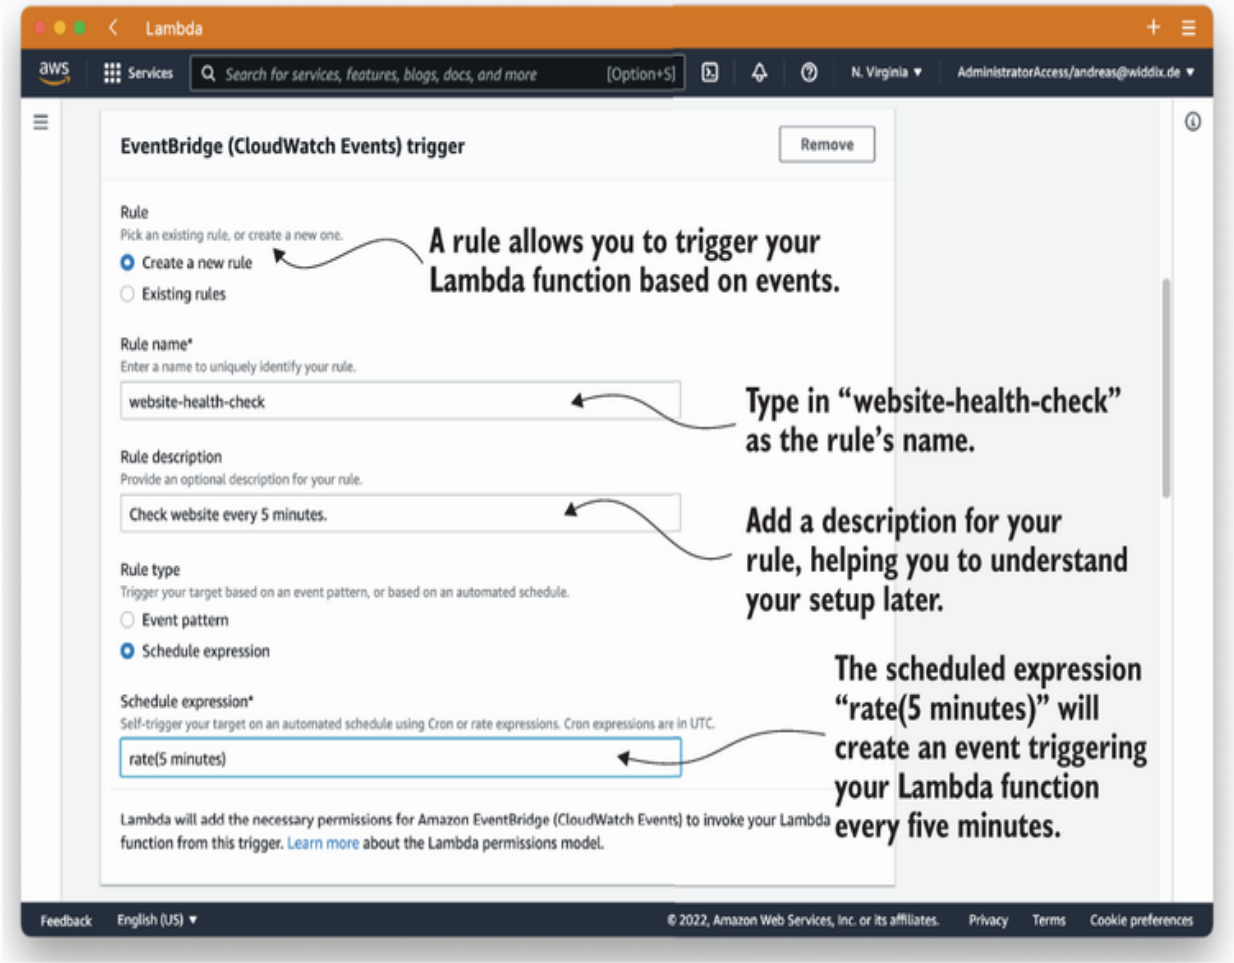

Figure 6.6 Configuring a scheduled event triggering your Lambda function every five minutes

Define recurring tasks using a *schedule expression* in form of `rate($value $unit)`. For example, you could trigger a task every five minutes, every hour, or once a day. `$value` needs to be a
