Please note: this example uses CloudTrail, which records all the activity within your AWS account. The CloudFormation template creates a trail to store an audit log on S3. That’s needed because the EventBridge rule does not work without an active trail.

6.3.4 Authorizing a Lambda function to use other AWS services with an IAM role

Lambda functions typically interact with other AWS services. For instance, they write log messages to CloudWatch allowing you to monitor and debug your Lambda function. Or they create a tag for an EC2 instance, as in the current example. Therefore, calls to the AWS APIs need to be authenticated and authorized. Figure 6.19 shows a Lambda function assuming an IAM role to be able to send authenticated and authorized requests to other AWS services.
