3. The Lambda function downloads the file, including the access logs, from the object store and sends the data to an Elasticsearch database to be available for analytics.

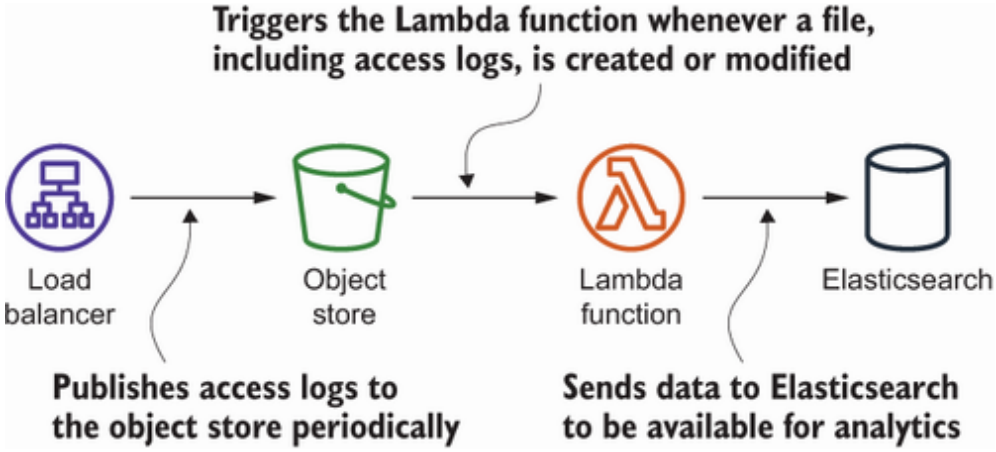

Figure 6.22 Processing access logs from a load balancer with AWS Lambda

We have successfully implemented this scenario in various projects. Keep in mind the maximum execution limit of 900 seconds when implementing data-processing jobs with AWS Lambda.

6.4.5 Use case: IoT backend

The AWS IoT service provides building blocks needed to communicate with various devices (things) and build event-driven applications. Figure 6.23 shows an example. Each thing publishes sensor data to a message broker. A rule filters the relevant messages and triggers a Lambda function. The Lambda function processes the event and decides what steps are needed based on the business logic you provide.
