If you turn on versioning for your bucket, removing the bucket will cause a `BucketNotEmpty` error. Use the Management Console to delete the bucket in this case as follows:

1. Open the Management Console with your browser.
2. Go to the S3 service using the main navigation menu.
3. Select the bucket you want to delete.
4. Click the Empty button, and confirm permanently deleting all objects.
5. Wait until objects and versions have been deleted, and click the Exit button.
6. Select the bucket you want to delete.
7. Click the Delete button, and confirm deleting the bucket.

7.4 Archiving objects to optimize costs

In the previous section, you learned about backing up your data to S3. Storing 1 TB of data on S3 costs about $23 per month. Wouldn’t it be nice to reduce the costs for storing data by 95%? Besides, by default, S3 comes with storage classes designed to archive data for long time spans.

Table 7.1 compares the storage class *S3 Standard* with storage classes intended for data archival.
