```
➥ Unable to perform download operations on GLACIER objects. You must
➥ restore the object to be able to perform the operation.
```

As mentioned in the error message, you need to restore the object before downloading it. By default, doing so will take three to five hours. That's why we will pay a little extra—just a few cents—for expedited retrieval. Execute the following command after replacing `$yourname` with your name, and `$objectkey` with the object's key:

```
$ aws s3api restore-object --bucket awsinaction-archive-$yourname \
➥ --key $objectkey \
➥ --restore-request Days=1,,GlacierJobParameters={"Tier"="Expedited"}
```

This results in the following command in my scenario:

```
$ aws s3api restore-object --bucket awsinaction-archive-awittig \
➥ --key taxstatement-2022-07-01.pdf
➥ --restore-request Days=1,,GlacierJobParameters={"Tier"="Expedited"}
```

As you are using expedited retrieval, you need to wait one to five minutes for the object to become available for download. Use the following command to check the status of the object and its retrieval. Don't forget to replace `$yourname` with your name, and `$objectkey` with the object's key:

```
$ aws s3api head-object --bucket awsinaction-archive-$yourname \
➥ --key $objectkey
{
    "AcceptRanges": "bytes",
    "Expiration": "expiry-date=\"Wed, 12 Jul 2023 ...\", rule-id=\"...\"",
    "Restore": "ongoing-request=\"true\"",                                  ①
    "LastModified": "2022-07-11T09:26:12+00:00",
    "ContentLength": 112,
    "ETag": "\"c25fa1df1968993d8e647c9dcd352d39\"",
    "ContentType": "binary/octet-stream",
    "Metadata": {},
    "StorageClass": "GLACIER"
}
```

① Restoration of the object is still ongoing.

Repeat fetching the status of the object until `ongoing-request` flips to `false`:

```
{
    "AcceptRanges": "bytes",
    "Expiration": "expiry-date=\"Wed, 12 Jul 2023 ...\", rule-id=\"...\"",
    "Restore": "ongoing-request=\"false\", expiry-date=\"...\"",            ①
```
