Once the stack is in the state `CREATE_COMPLETE`, two EC2 instances are running. Both mounted the EFS share to /home. You also copied the existing home directories to the EFS share. It's time to connect to the instances via the Session Manager and do some tests to see whether users can really share files between the EC2 instances in their home directory.

9.4 Sharing files between EC2 instances

Use the Session Manager to connect to the virtual machine named `EC2InstanceA`. Use the following command to get the EC2 instance IDs of `EC2InstanceA` and `EC2InstanceB`:

```
$ aws cloudformation describe-stacks --stack-name efs \
➥ --query "Stacks[0].Outputs"
[{
  "Description": "[...]",
  "OutputKey": "EC2InstanceA",
  "OutputValue": "i-011a050b697d12e7a"
}, {
  "Description": "[...]",
  "OutputKey": "EC2InstanceB",
  "OutputValue": "i-a22b67b2a4d25a2b"
}]
```

Then, establish a second connection to the virtual machine `EC2InstanceB` with the help of the Session Manager and switch to the user's home directory, as shown in the next code snippet. By the way, the default user on Amazon Linux 2 is the ec2-user. But when using the Session Manager via the AWS Management Console, you are logged in with another user named ssm-user:
