Packer uses SSH to connect to the EC2 instance. We are using the Systems Manager for increased security and usability instead.

IAM role ec2-ssm-core

Packer requires an IAM role named `ec2-ssm-core`. You created the role in the chapter 3 section, “Creating an IAM role.”

Listing 15.7 The Packer template to build an Etherpad AMI, part 2

```
source "amazon-ebs" "etherpad" {
  ami_name = "awsinaction-etherpad-{{timestamp}}"   ①
  tags = {
    Name = "awsinaction-etherpad"
  }
  instance_type = "t2.micro"                        ②
  region        = "us-east-1"                       ③
  source_ami_filter {                               ④
    filters = {
      name = "amzn2-ami-hvm-2.0.*-x86_64-gp2"       ⑤
      root-device-type    = "ebs"
      virtualization-type = "hvm"
    }
    most_recent = true                              ⑥
    owners      = ["137112412989"]                  ⑦
  }
  ssh_username         = "ec2-user"
  ssh_interface        = "session_manager"          ⑧
  communicator         = "ssh"
  iam_instance_profile = "ec2-ssm-core"             ⑨
  ami_groups = ["all"]
  ami_regions = ["us-east-1"]                       ⑩
}
```

① Specifies the name for the new AMI adding {{timestamp}} to ensure uniqueness

② The instance type for the temporary build instance
