```
==> Builds finished. The artifacts of successful builds are:
--> awsinaction-etherpad.amazon-ebs.etherpad: AMIs were created:
us-east-1: ami-06beed8fa64e7cb68
```

Note the AMI ID because you will need it to deploy Etherpad on AWS soon. As shown in figure 15.5, we are using a similar approach to roll out Etherpad as we did in the previous section. The Auto Scaling group orchestrates a rolling update. But instead of using a user data script to deploy Etherpad, the Auto Scaling group provisions EC2 instances based on the AMI with Etherpad preinstalled.

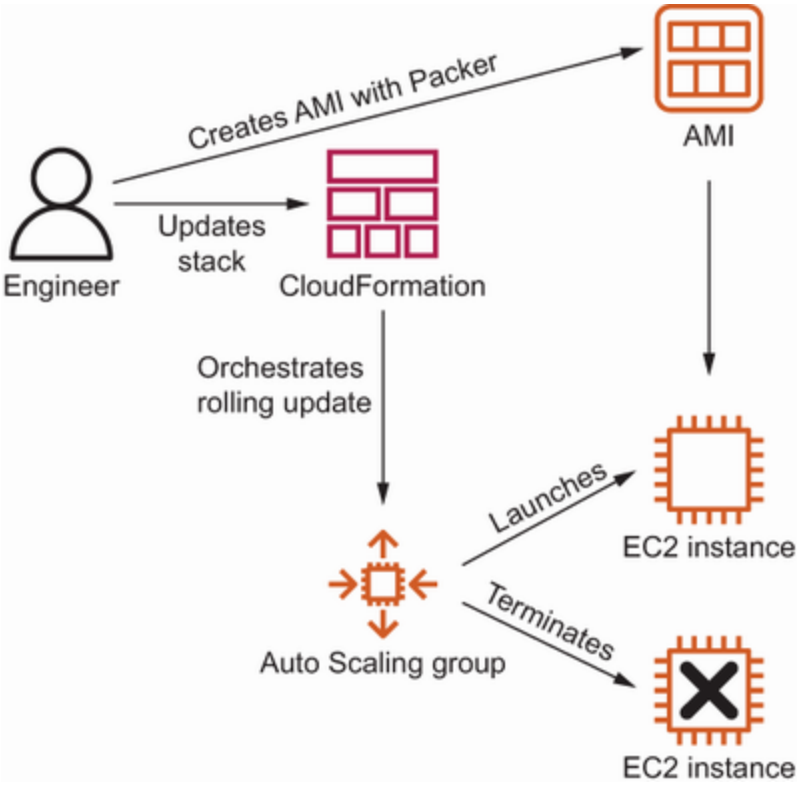

Figure 15.5 Rolling out an AMI with Etherpad preinstalled, built by Packer with the help of CloudFormation

Use the following command to create the CloudFormation stack to roll out the Etherpad AMI. Replace `$AMI` with the AMI ID from
