```
};

function getImage(id, cb) {
  db.getItem({                                                    ②
    'Key': {
      'id': {                                                     ③
        'S': id
      }
    },
    'TableName': 'imagery-image'
  }, function(err, data) {
    if (err) {
      cb(err);
    } else {
      if (data.Item) {
        cb(null, mapImage(data.Item));
      } else {
        cb(new Error('image not found'));
      }
    }
  });
}

app.get('/image/:id', function(request, response) {             ④
  getImage(request.params.id, function(err, image) {
    if (err) {
      throw err;
    } else {
      response.json(image);                                       ⑤
    }
  });
});
```

① Helper function to map a DynamoDB result to a JavaScript object

② Invokes the getItem operation on DynamoDB

③ id is the partition key.

④ Registers the route with Express

⑤ Responds with the image process

The only thing missing is the upload part, which comes next.

Uploading an image

Uploading an image via a `POST` request requires several steps:
